- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Tramo fluvial de régimen hídrico pluvial, puramente mediterráneo, con máximos de caudal equinociales y un marcado mínimo estival. Este espacio se ubica en el tramo medio del Jalón, en donde recibe uno de sus afluentes por la derecha el río Piedra. El río en este sector atraviesa, claramente inadaptado a las estructuras dominantes, las alineaciones montañosas con orientación de fluencia SE-NW. La excavación cuaternaria en el Valle del Jalón ha labrado profundas y sinuosas gargantas en los materiales resistentes del paleozoico. En el fondo del valle aparecen depósitos aluviales poco desarrollados y aprovechados para el asentamiento en franjas laterales de bosques galería bien desarrollados en los que predomina Populus alba, Populus nigra y Salix alba. Los terrenos de cultivo llegan en ocasiones hasta cerca del cauce, impidiendo el desarrollo de la vegetación ribereña.

4.2 Quality and importance

Destacan las formaciones de ribera bien desarrolladas con bosques de Populus alba y Salix alba y la buena conservación paisajística del espacio.
