Learn to recycle

Sustainable solutions for a
better tomorrow

- Environmental damage caused by packaging
- Packaging Reduction
- Recycable packaging
- Packaging that can be reused
- European Union laws about this topic
- European union laws about the environmental damage caused by packaging

Recycling is not just about waste management; it's about resource management.

01 - WAYS WASTEFUL PACKAGING IS HURTING OUR ENVIRONMENT

Excess and wasteful packaging can contribute to air pollution in a variety of ways. For example, wasteful packaging leads to more waste incineration activities.

CO₂

Litter

- However, litter is a major concern for many people. Wasteful packaging such as food and beverage containers make up the third most abundant component of litter.

Air pollution

- This type of processing leads to the production of harmful gasses which infiltrate the environment. These gasses include vinyl chloride, CFCs and hexane.

Birdlife

- Worryingly, plastic kills over one million marine birds every single year. Birds ingest plastic packaging both directly and through the food chain. Birds can also be killed or injured by plastic packaging by getting caught up or tangled up in plastic.

02 - Ideas to reuse

Ideas to reuse glass:

- Decoration for home
- Candleholder
- Container Sand Art
- Organizers

Ideas to reuse cardboard :

Cat's toys

Beds to animals

Toys

Storing box

02 - Ideas to reuse

Ideas to reuse plastic:

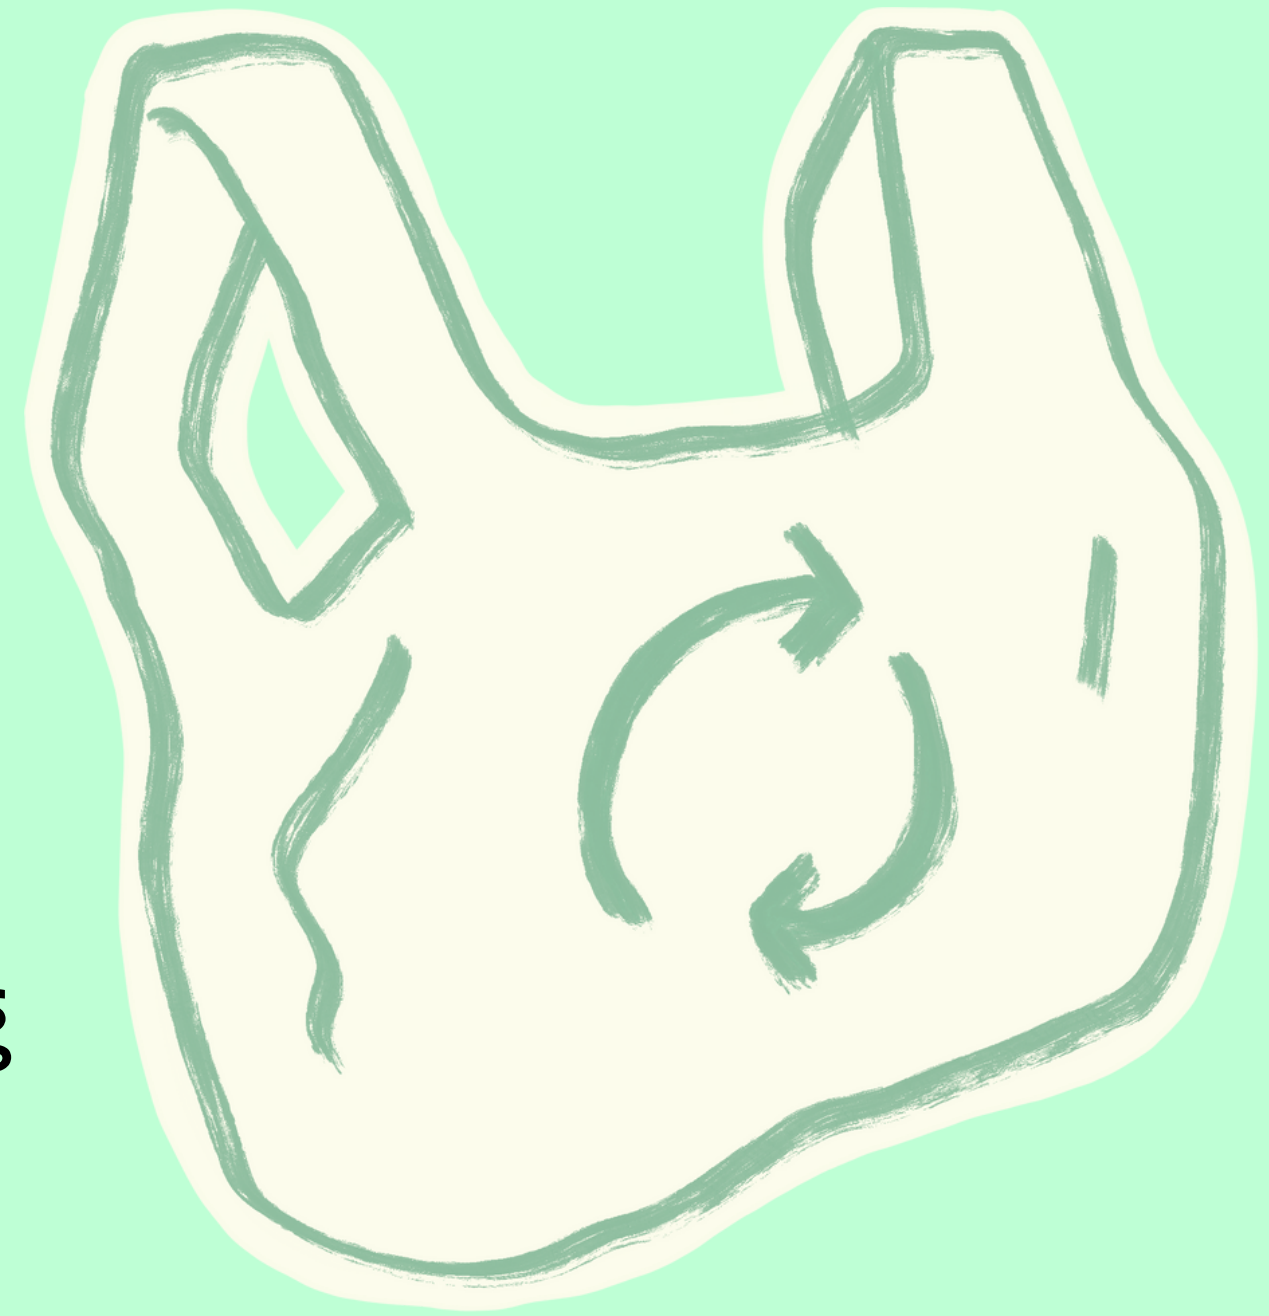

- Punched Can Lanterns
- Drinker to animals.
- Toothbrush organizer
- Plastic flower pot

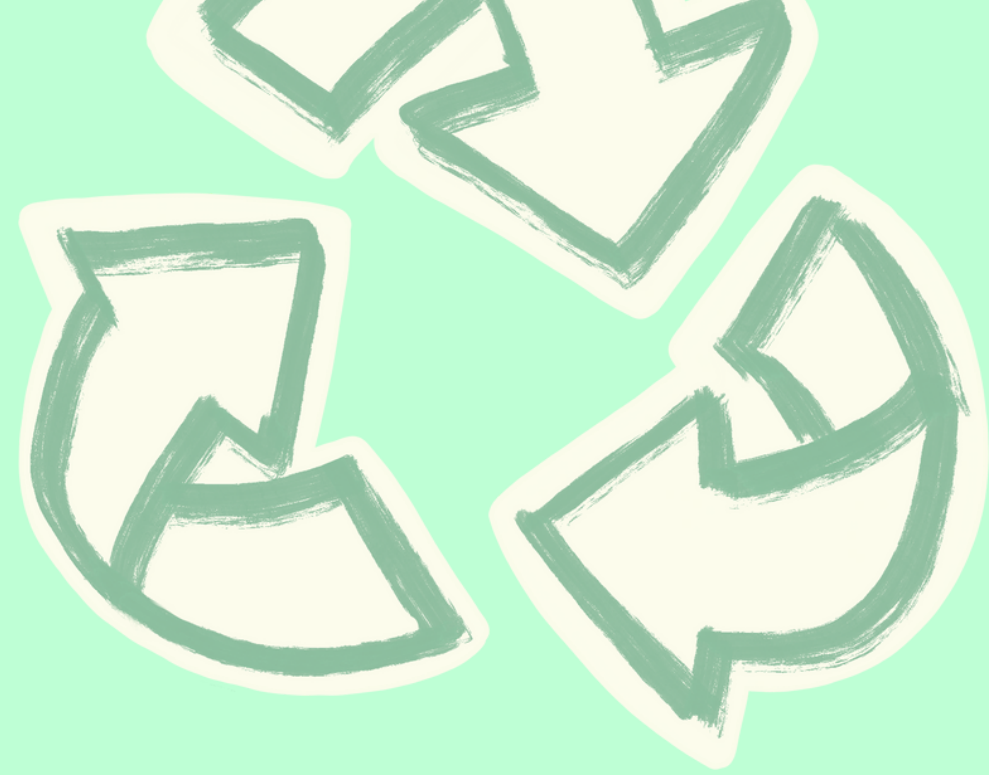

02 - Ideas to reuse

03 - European union laws about the environmental damage caused by packaging

Directive 94/62/EC sets out the EU's rules on managing packaging and packaging waste. promote the reuse, recycling and other forms of recovering of packaging waste, instead of its final disposal, thus contributing to the transition towards a circular economy.

Thanks
